Knowing what makes a difference

ⓒ ClimatePartner
Improving lives

If anyone knows what is important when it comes to sustainability, it is ClimatePartner. After all it is the daily work of the climate protection experts to help companies like Schneider and many others, to reduce unnecessary emissions and ultimately offset unavoidable ones. In a sense, it is therefore only logical that ClimatePartner themselves work on their climate neutrality and largely avoid CO_2 emissions. One of the factors contributing to this are their centrally located comany facilities, which can be reached by bicycle or public transportation - and of course also our writing instruments, which they have been using for many years..

Laura Müller, Key Account Manager at ClimatePartner, explains why the company relies on our products: "Schneider was one of the first manufacturers of climate-neutral writing instruments and is continuously improving its products from a sustainability-oriented perspective. A great deal is being invested in research to ensure that more and more biobased and recycled plastics can be used. This is exactly the right way to minimise emissions and reduce material consumption".
We have nothing to add to this.
Many thanks for this great compliment!

The **Schneider Reco** is the first ballpoint pen to be certified with the Blue Angel and in use at ClimatePartner's offices.

"
Schneider pursues the theme of the climate protection with such credibility and in a consistent way like only few others.

"

We are particularly impressed, for example, that the company is consistently avoiding domestic flights and is using rail instead.

Laura Müller
Key Account Managerin, ClimatePartner

How does Schneider offset CO$_2$-emissions?

#theschneiderway

Project standards: Verified Carbon Standard (VCS), SOCIALCARBON
Verified by RINA Services S.p.A. (RINA)

We support the international Environmental and Social Project Ecomapuá REDD in Brazil.

Marajó, which is by far the largest island in the country, is located in the state of Pará in the north of Brazil. The island is divided by numerous branches of the Amazon River, whose riverbanks are surrounded by the so-called Várzea, a unique ecosystem of wetland of alluvial forests. To protect the livelihoods of the people and animals living there, the Ecomapuá REDD project is campaigning against commercial deforestation on an area equivalent to one third of the Saarland.

The project pursues the strategy of combining environmental protection and economic interests of the local population. Therefore, the investments of Schneider and the other project partners are used for the training of farmers and the financing of the sustainable cultivation of acai berries, among other things. By 2032, 1.5 million tonnes of CO$_2$ are expected to be offset in this way.

145.000 t

This is how much CO2 is offset every year by our project partners in Pará.

More about our climate protection partner can be found on page 2 and in our FAQ at schneiderpen.com/faq.

Our environmental management system has been certified according to the world's strictest environmental management standard, EMAS, since 1998.
